Education

University of South Florida Tampa, FL
B.S. Computer Science | GPA 3.5/4.0 *Aug. 2023 – May 2027*

Relevant Coursework: Data Structures and Algorithms, Database Design, Secure Coding, Software Engineering

Technical Skills

Languages: JavaScript/TypeScript, Python, Java, C++, SQL, HTML/CSS
Technologies: Git, GitHub, React, Node.js, Express.js, PostgreSQL, MySQL, Vercel, VS Code, AWS S3

Experience

Publix Super Markets Lakeland, FL
Grocery Clerk *May 2023 – Nov. 2023*

- Stocked and organized products on store shelves to maintain inventory accuracy and display standards.
- Assisted customers in locating products and provided recommendations to improve their shopping experience.
- Worked with team members to keep high-demand areas restocked efficiently.

Involvement

Hackabull Hackathon Tampa, FL
Participant — IoT Agricultural Monitoring Solution *Apr. 2025*

- Built a sensor-driven IoT monitoring system integrating Arduino devices with a cloud dashboard to collect and visualize environmental data.
- Collaborated in an Agile hackathon team to design and deploy a working prototype that integrates hardware sensors, cloud services, and real-time data visualization.

HackJam Hackathon Tampa, FL
Participant — PainPortal UI/UX Anti-Usability Project *Nov. 2025*

- Developed an intentionally chaotic login interface with unpredictable UI behavior as part of an anti-usability design concept.
- Led portions of development, debugging, and team coordination while presenting the final demo to judges.

Projects

Personal Portfolio Website
React, TypeScript, Tailwind CSS, Vite, Motion, Claude Code, Git *Jun. 2025 - Present*

- Developed a responsive personal portfolio using React, TypeScript, and Tailwind CSS, featuring reusable components, interactive project showcases, and modern layouts optimized for desktop and mobile devices.
- Implemented custom Canvas-based cursor effects and scroll-triggered animations using Motion, incorporating accessibility and performance optimizations while leveraging Claude Code for AI-assisted development.

ValUp Discord Bot
JavaScript, Node.js, discord.js, Cloudflare R2, AWS SDK, Git *Jan. 2026*

- Developed a Discord application using Node.js and discord.js, implementing asynchronous, event-driven workflows and interactive slash commands that allow Valorant players to retrieve gameplay lineup videos based on map, agent, and side selections.
- Integrated Cloudflare R2 using the AWS S3-compatible SDK to generate secure, time-limited video URLs, while organizing application logic into reusable modules and securely managing credentials through environment-based configuration.
- Deployed the bot across 6 Discord servers, serving approximately 40+ users and providing on-demand access to Valorant lineup videos through interactive commands.
